POST-TRANSPLANT OUTCOME SUMMARY — SOLID ORGAN TRANSPLANT PROGRAMME

Date: 06 July 2026

This summary presents consolidated post-transplant outcomes for all solid-organ transplants performed at Kamalnayan Bajaj Hospital under the Zonal Transplant Coordination Centre, prepared in support of NOTTO transparency and public-reporting directives. Data reflect **211** recipient records for procedures carried out between **07 January 2021 and 30 June 2026**.

COHORT SNAPSHOT

Total recipients 211	Kidney 204 (96.7%)	Living donor 196 (92.9%)
Male / Female 185 / 26	Liver 6 (2.8%)	Deceased donor 15 (7.1%)
Mean age 36.6 yr (8–66)	Heart 1 (0.5%)	Paediatric (<18 yr) 7

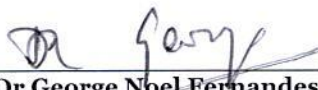

Annual volume: 2021 – 30 | 2022 – 27 | 2023 – 40 | 2024 – 41 | 2025 – 49 | 2026 – 24 (to 29 Jun)

SURVIVAL OUTCOMES BY FOLLOW-UP WINDOW

Follow-up window	Alive	Deaths	With outcome	Survival*
1 month	203	5	208	97.6%
3 months	191	7	198	96.5%
6 months	173	12	185	93.5%
1 year	144	15	159	90.6%
3 years	35	8	43	81.4%
5 years & above	8	1	9	88.9%

Survival is expressed among recipients with a documented outcome at each window. Blank later-window entries predominantly reflect recipients who have not yet reached that follow-up milestone (administrative censoring) rather than missing follow-up. Actuarial (Kaplan–Meier) estimates have not been computed.

Key observations. Twenty-three recipient deaths were recorded across all windows (22 kidney, 1 heart; no liver deaths). Graft dysfunction was documented in 12 recipients, and 3 recipients were marked lost to follow-up. Early survival is strong (97.6% at one month; 90.6% at one year among those with recorded one-year data), consistent with a predominantly living-donor kidney programme.
